

Infant Bottle Procedure

You will need to supply filled bottles for your infant as follows:

1. The bottles shall be sterilized.
2. The nipple must be covered.
3. The bottle shall be labeled appropriately.
4. The bottles must be brought to the center in a clean, insulated container that keeps the formula or breast milk at 41 degrees Fahrenheit or below.
5. Staff shall return all bottles daily.
6. The parent shall provide one unopened can of ready to feed formula or bag of frozen breast milk. (In the event that the baby refuses filled bottles, or one bottle gets spilled, ECT.)

Bottle labels must contain the following information:

- *First name and last initial of child
- *Date bottle was prepared
- *Time bottle was prepared
- *Number of ounces in bottle
- *Initials of person that prepared the bottle

Please remember that bottles need to be transported in a clean, insulated container that keeps the formula at 41 degrees or below.

Thank you for your cooperation in helping us follow state regulations!
